

Orchard Park 1 – Explores a Fun Way to Learn about GERMS!

Small Group Activity – How can you learn about germs through a FUN activity? Here's how! Children were given a spray bottle with colored water and a picture of a nose on the bottle. In Group 1, the children were spraying the bottle and pretending to sneeze to show how germs spread when you do not cover your nose. In Group 2, the children were working with small cups of water, dish soap and straws. The children were blowing into the water and creating bubbles. They were then talking about how many colors they could see in the bubbles. That's how you make learning about germs, fun!
